## Professional Summary

Motivated and detail-oriented Full Stack Developer with a strong expertise in building dynamic web applications using the Django framework. Skilled in back-end development, database design, and crafting responsive front-end interfaces with Jinja templating. Proficient in integrating seamless user experiences and ensuring efficient application performance. Known for delivering robust, scalable, and maintainable solutions while collaborating effectively with cross-functional teams. Adept at troubleshooting, optimizing, and innovating in both front-end and back-end domains to drive project success.

## Education

Air University, Rawalpindi, PW  
ADCS , Computer Science , Jan. 2025

## Project

### Phone Marketplace

Developed a dynamic and user-friendly marketplace platform using the Django framework. The project connects shopkeepers and sellers, providing a secure and efficient platform for transactions. Key features include:

- Role-Based Functionality:** Implemented distinct modules for Admin, Sellers, and the Marketplace to ensure seamless role-based access and functionality.
- Seller Verification:** Enabled a verification system allowing only authenticated and approved shopkeepers to list and sell products.
- Reservation Feature:** Integrated a reservation system where users can reserve products online and pick them up later at their convenience.
- Advanced Search and Filtering:** Designed robust search and filtering tools to help users quickly find products based on specific criteria.
- Admin Panel:** Provided a comprehensive admin interface for managing users, products, and transactions.

This project showcases my expertise in back-end development, database management, front-end integration using Django's templating system, and the implementation of scalable and secure web applications.
